A practical handbook for administrators

Your guide to the admin workspace.

Know where to go, what to check and how to finish the task.

Edition 1 · 17 October 2026
20 pages · Annotated screenshots · Shareable training copy

Find your way

A navigation map and the right starting point for each task.

Follow the steps

Numbered callouts guide you through the real interface.

Check the outcome

Know the difference between drafted, queued, published and delivered.

START HERE

A map for your next task.

Open your team's UniPortal admin link and sign in with your own staff account. Use this page to jump directly to a workflow.

Know where to start	03	Turn an upload into a draft	04
Review the resource itself	05	Publish only after review	06
Find courses missing material	07	Choose the right exam term	08
Upload schedules, then attendance	09	Prepare an exam paper	10
Assign and review a question	11	Verify answers before activation	12
Apply question changes carefully	13	Find the right student	14
Review a payment request	15	Compose an announcement	16
Confirm once, then track delivery	17	Read the error before retrying	18
Staff access & mobile navigation	19	Daily checklist & quick fixes	20

How to read the guide: orange numbers identify visible controls. Steps may require scrolling. Screenshots show the actual interface with fictional sample records; labels and menus can differ with permissions or later updates. Zoom in for small field labels.

Your sidebar, translated

Content

File inbox, published resources, courses, placements and coverage.

Exams & quizzes

Exam terms, schedule imports, student records, papers, questions and attempts.

Students & communication

Student lookup, broadcasts, history and payment requests.

Operations

Background processing, extraction, message delivery and reminder history.

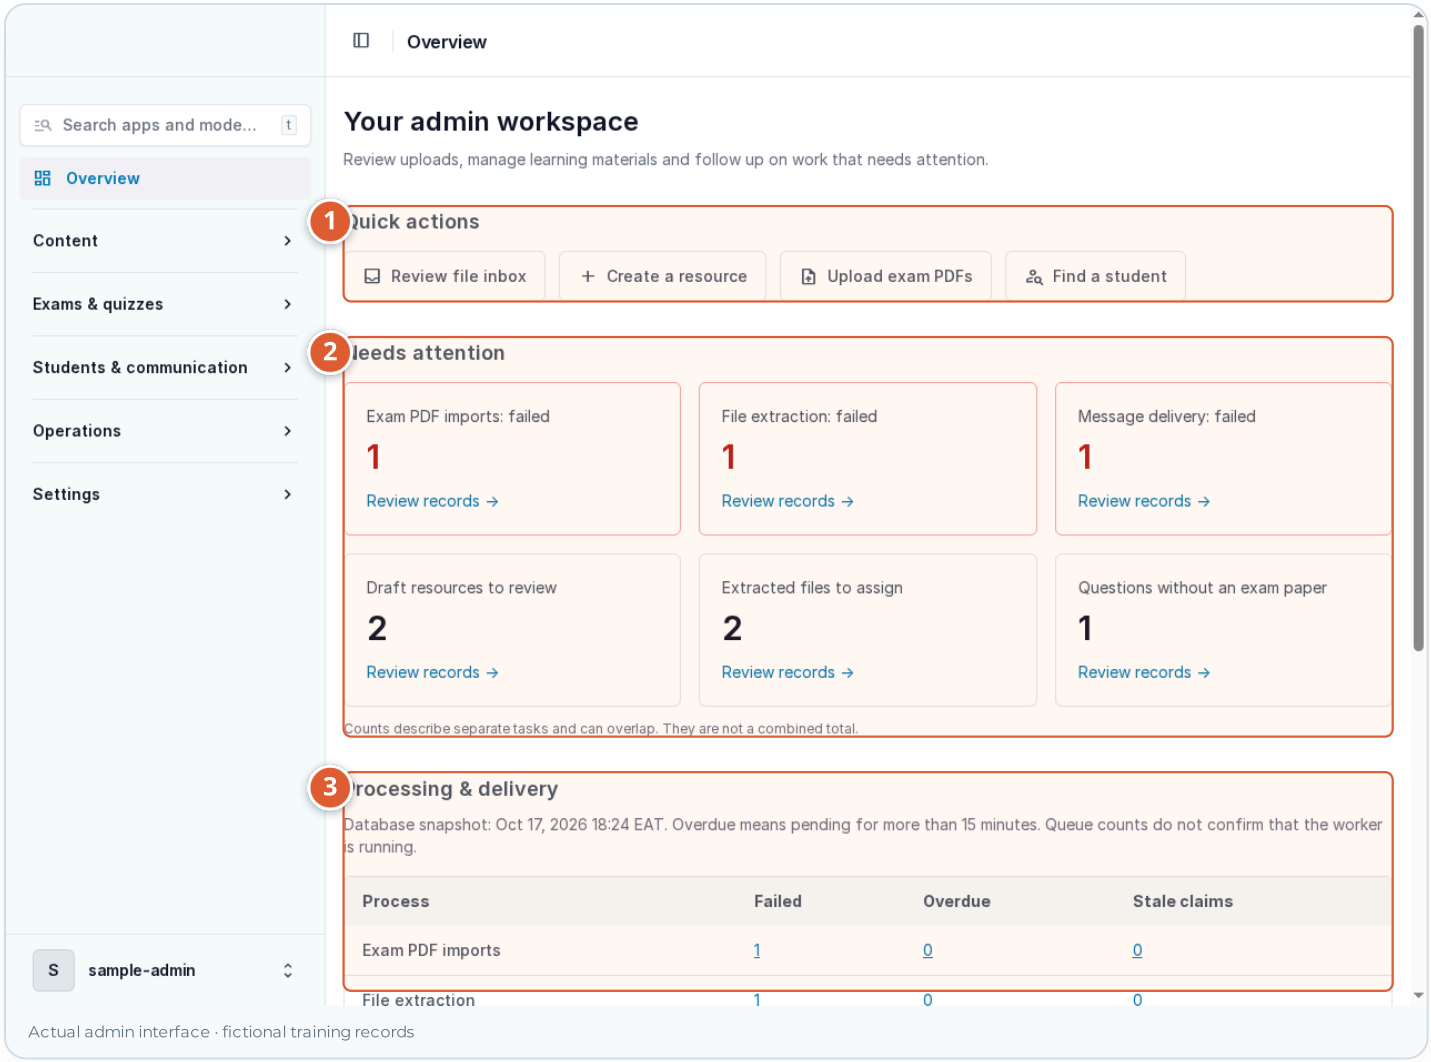

Settings

Site settings, plans, staff accounts and permission groups.

Click a sidebar group heading to expand it. Use Overview to return home. Missing menu items usually mean your account lacks the relevant permission.

Know where to start

WHERE TO GO / Overview

Actual admin interface · fictional training records

Read the result message after saving or applying an action. A selection alone does not apply changes.

1 Choose a quick action

Use Review file inbox, Create a resource, Upload exam PDFs or Find a student to begin a common task.

2 Open a review card

Click Review records to open the matching list. Drafts, extracted files and unassigned questions are different tasks.

3 Check processing & delivery

Scroll down for Failed, Overdue and Stale claims. Select a count to inspect the records behind it.

REMEMBER

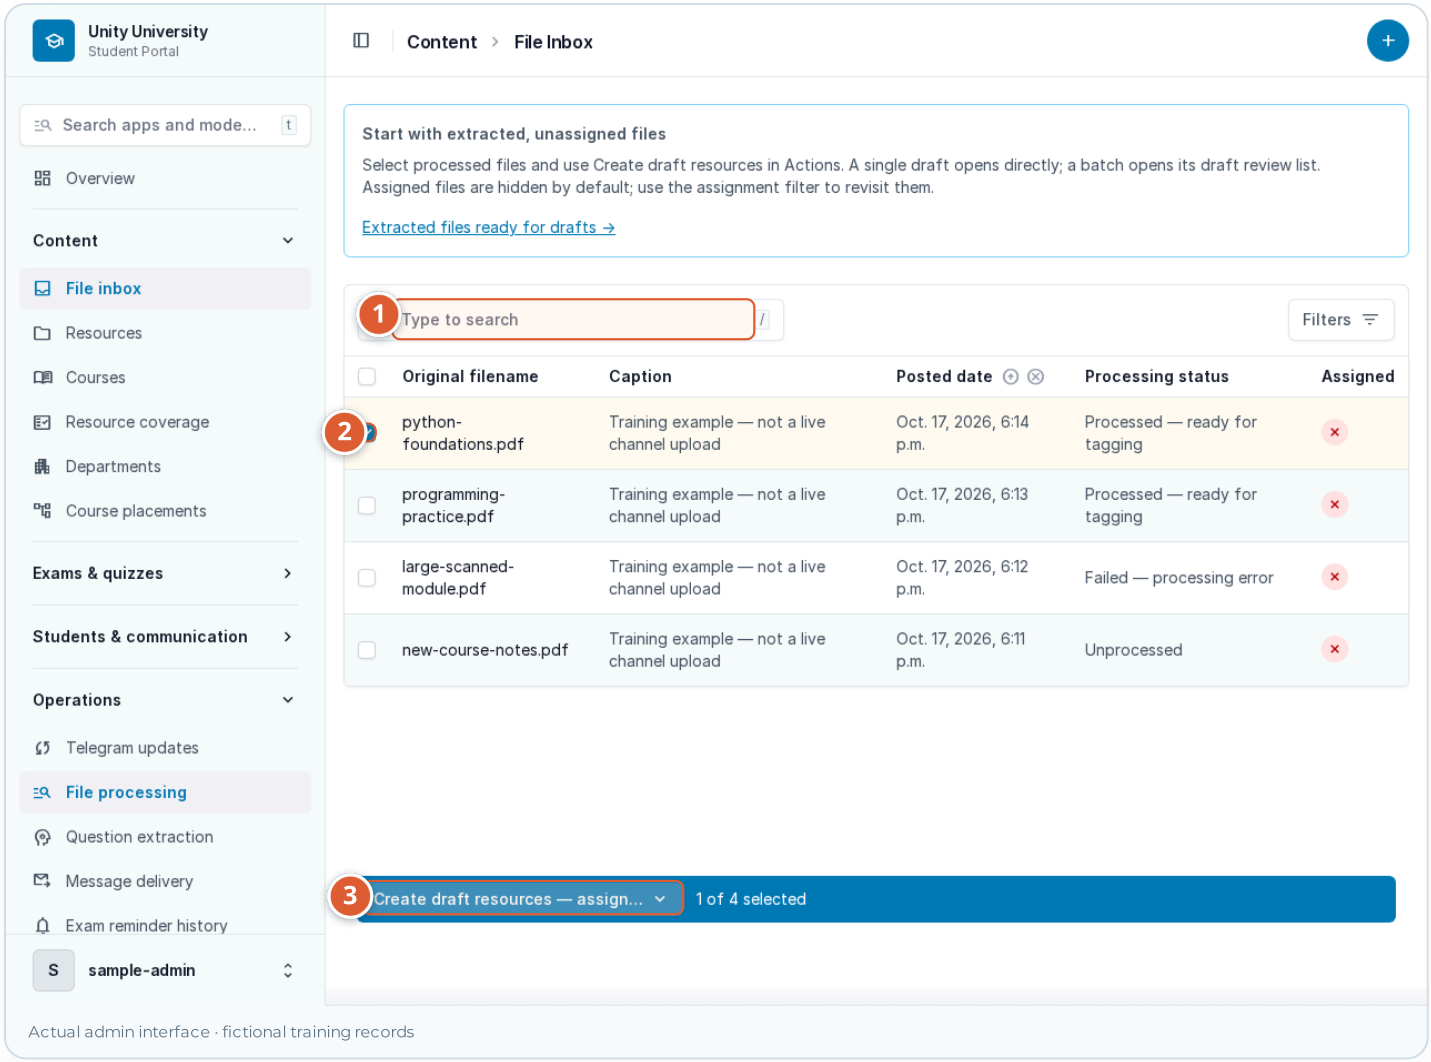

Counts can overlap. A zero count does not prove the background worker is running.

DONE WHEN

You can identify the next task and open the correct filtered list.

Turn an upload into a draft

WHERE TO GO / Content → File inbox

Actual admin interface · fictional training records

Read the result message after saving or applying an action. A selection alone does not apply changes.

1 Find the source file

Search by filename or caption. Use Filters to show processed, unassigned files. Assigned files are hidden by default.

2 Select the reviewed file

Tick the row checkbox. Open its filename first if you need to inspect its processing result or extracted text.

3 Create the draft

In Actions choose Create draft resources — assign courses and review next, then Go. One draft opens directly; a batch opens its review list.

REMEMBER

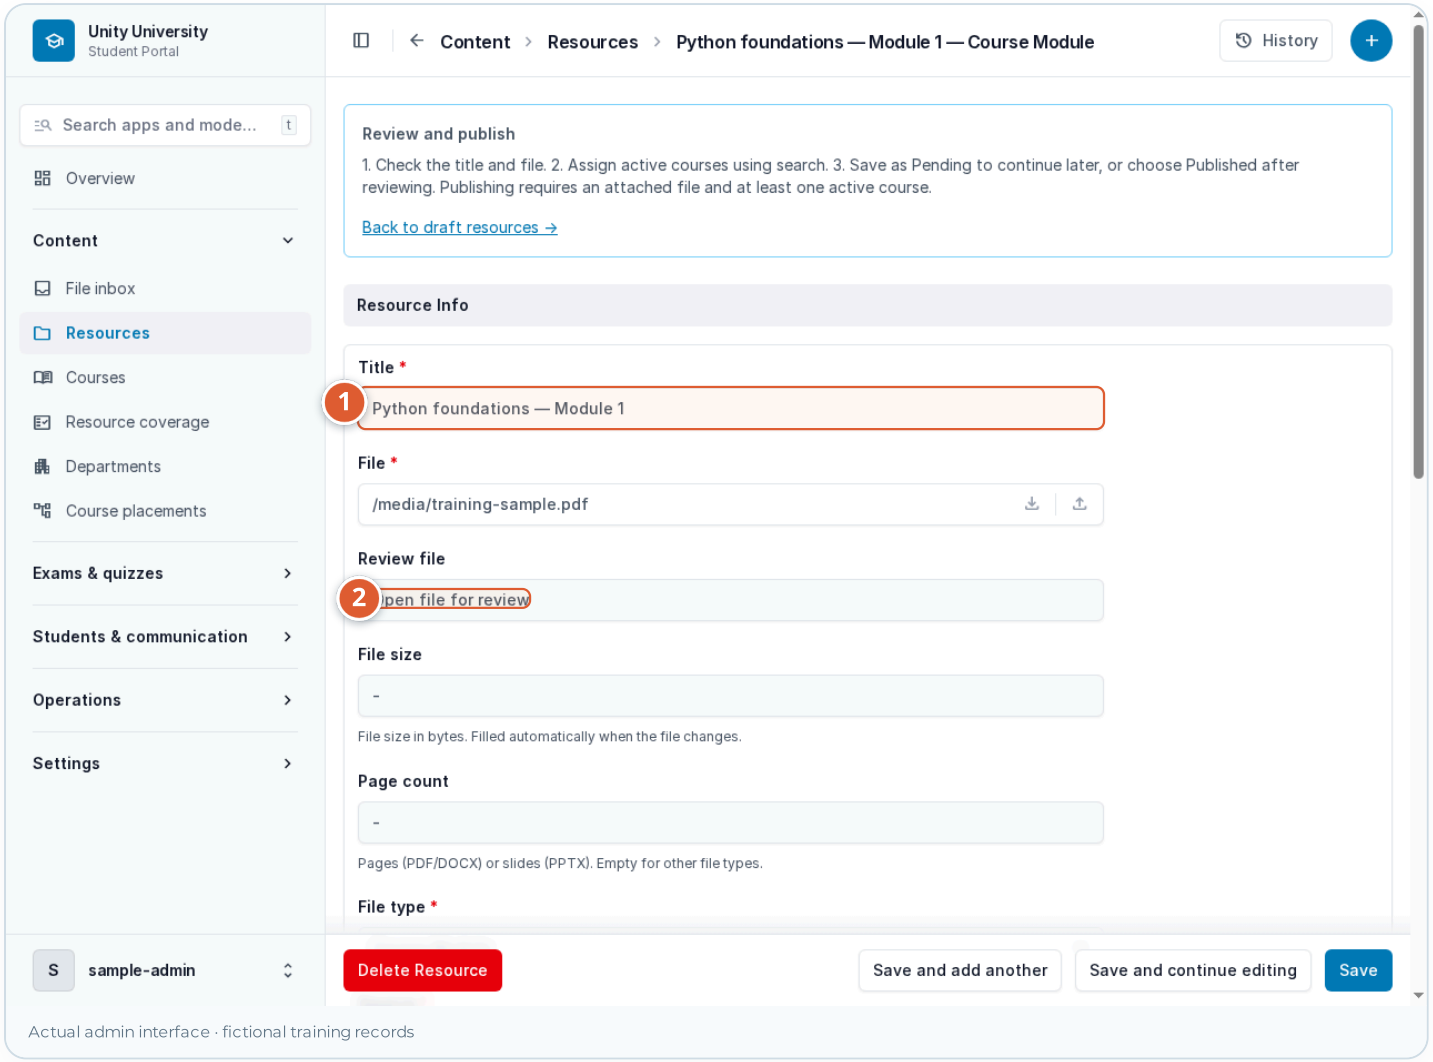

Processed means extraction finished. A new draft is still pending and is not yet visible to students.

DONE WHEN

A pending resource exists and is ready for course assignment and file review.

Review the resource itself

WHERE TO GO / Content → Resources → open a draft

Actual admin interface · fictional training records

Read the result message after saving or applying an action. A selection alone does not apply changes.

1 Make the title useful

Use a clear title that tells a student what the material contains. Confirm that the correct file is attached.

2 Open the actual document

Select Open file for review. Check the subject, legibility, completeness and whether the material belongs to the selected course.

3 Continue down the form

Scroll to File type, Source and Courses. Choose the appropriate type and source; search for each active course the file belongs to.

REMEMBER

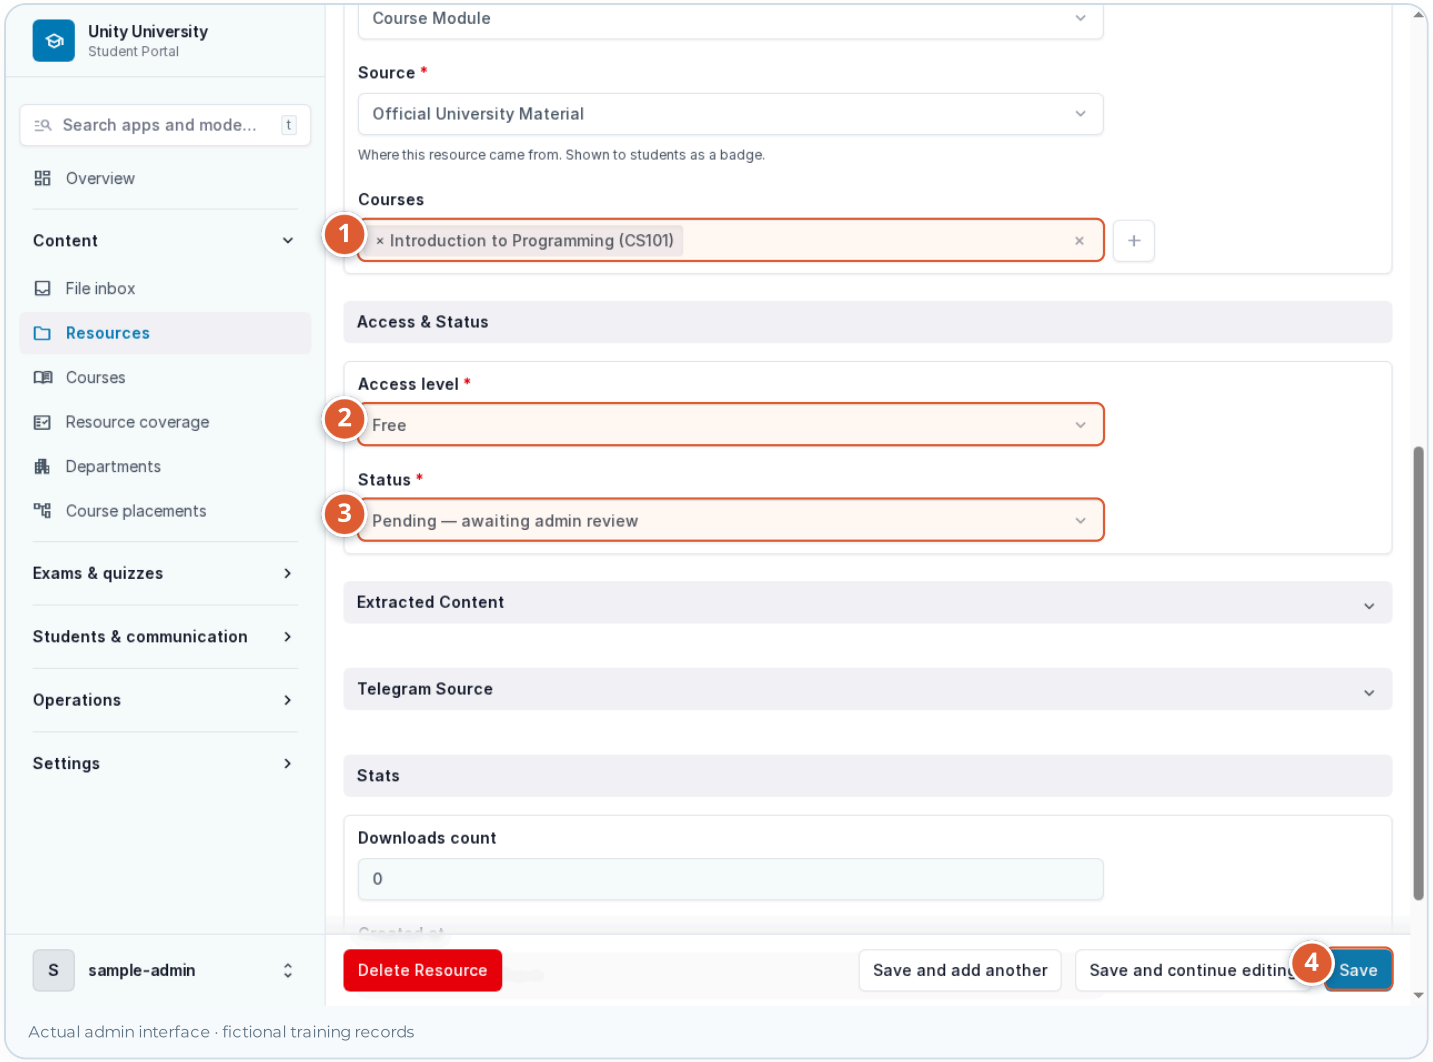

An existing file reference does not guarantee the file opens. Preview it before publishing. If a new upload has no preview yet, save it as Pending first.

DONE WHEN

You have checked the actual file and know its correct course assignment.

Publish only after review

WHERE TO GO / Content → Resources → Access & Status

Actual admin interface · fictional training records

Read the result message after saving or applying an action. A selection alone does not apply changes.

1 Check the course tags

At least one assigned course must be active. A course assignment and a department placement serve different purposes.

2 Keep the free adoption policy

Choose Free for the current adoption period. Do not introduce new paid-access rules while doing routine content work.

3 Choose the visibility

Leave Pending to finish later, or choose Published — visible to students once the file is reviewed.

4 Save the change

Press Save. For several reviewed drafts, select them in Resources and use Publish selected reviewed drafts → Go.

REMEMBER

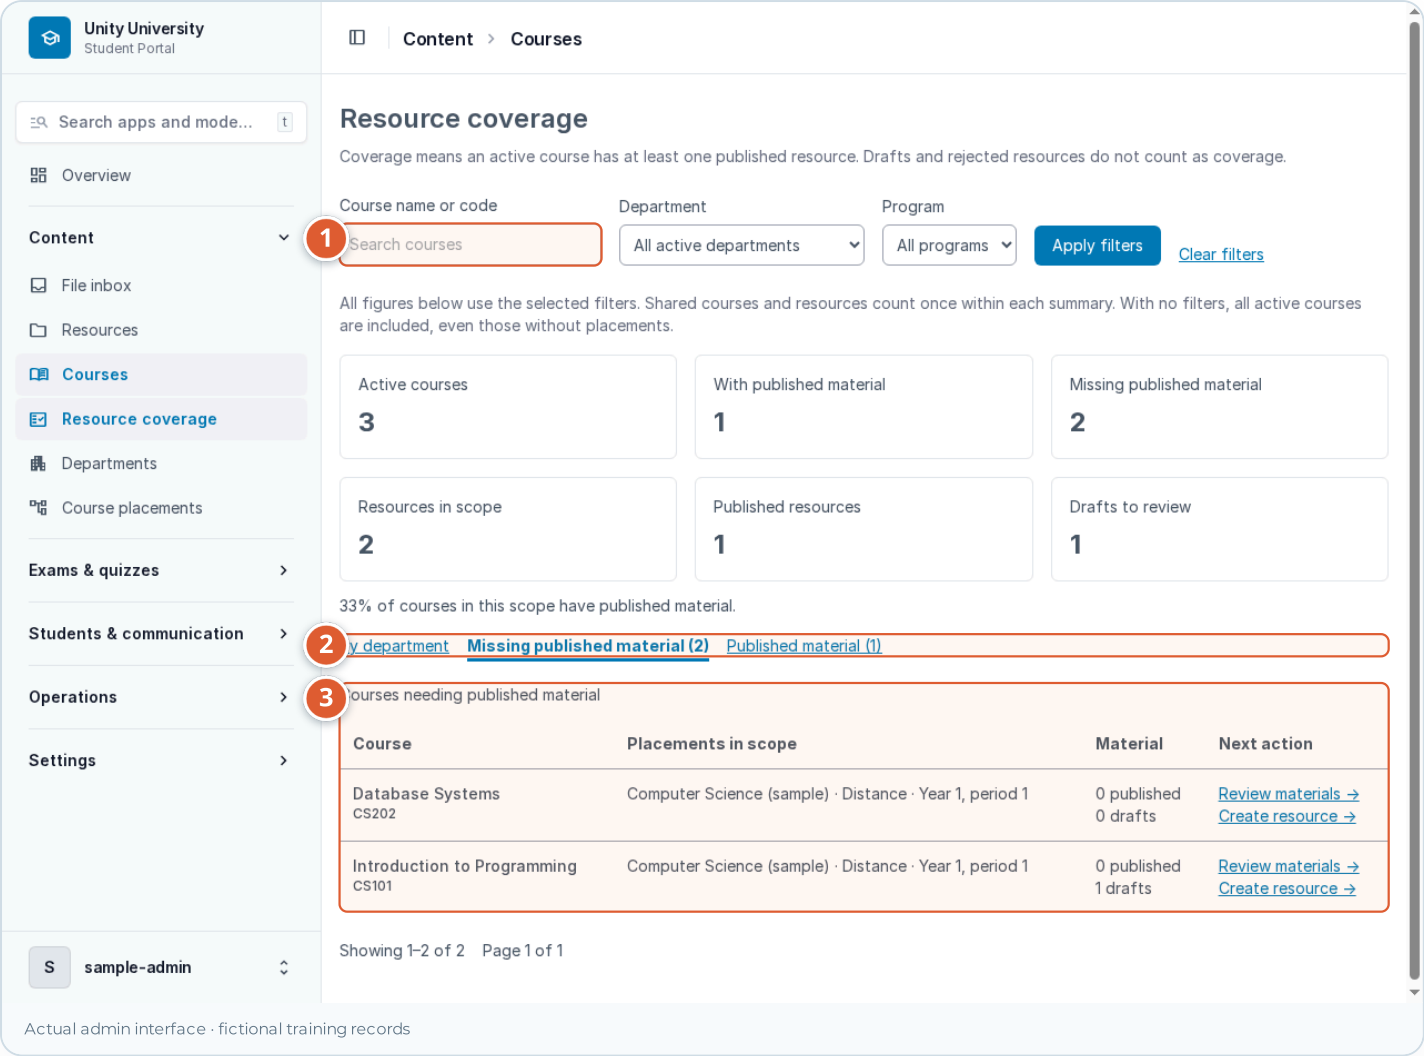

Bulk publishing skips entries that are not pending, have no file reference or have no active course. Read the success/skipped message.

DONE WHEN

The reviewed resource is Published and attached to the correct active course.

Find courses missing material

WHERE TO GO / Content → Resource coverage

Actual admin interface · fictional training records

Read the result message after saving or applying an action. A selection alone does not apply changes.

1 Set your scope

Search for a course and filter by department or program. Apply the filters before interpreting the coverage numbers.

2 Choose the missing-material view

Open Missing published material to see courses that still need student-visible resources.

3 Follow the next action

Review materials opens the course's files. Create resource starts a new resource with that course selected. Review and publish to close the gap.

REMEMBER

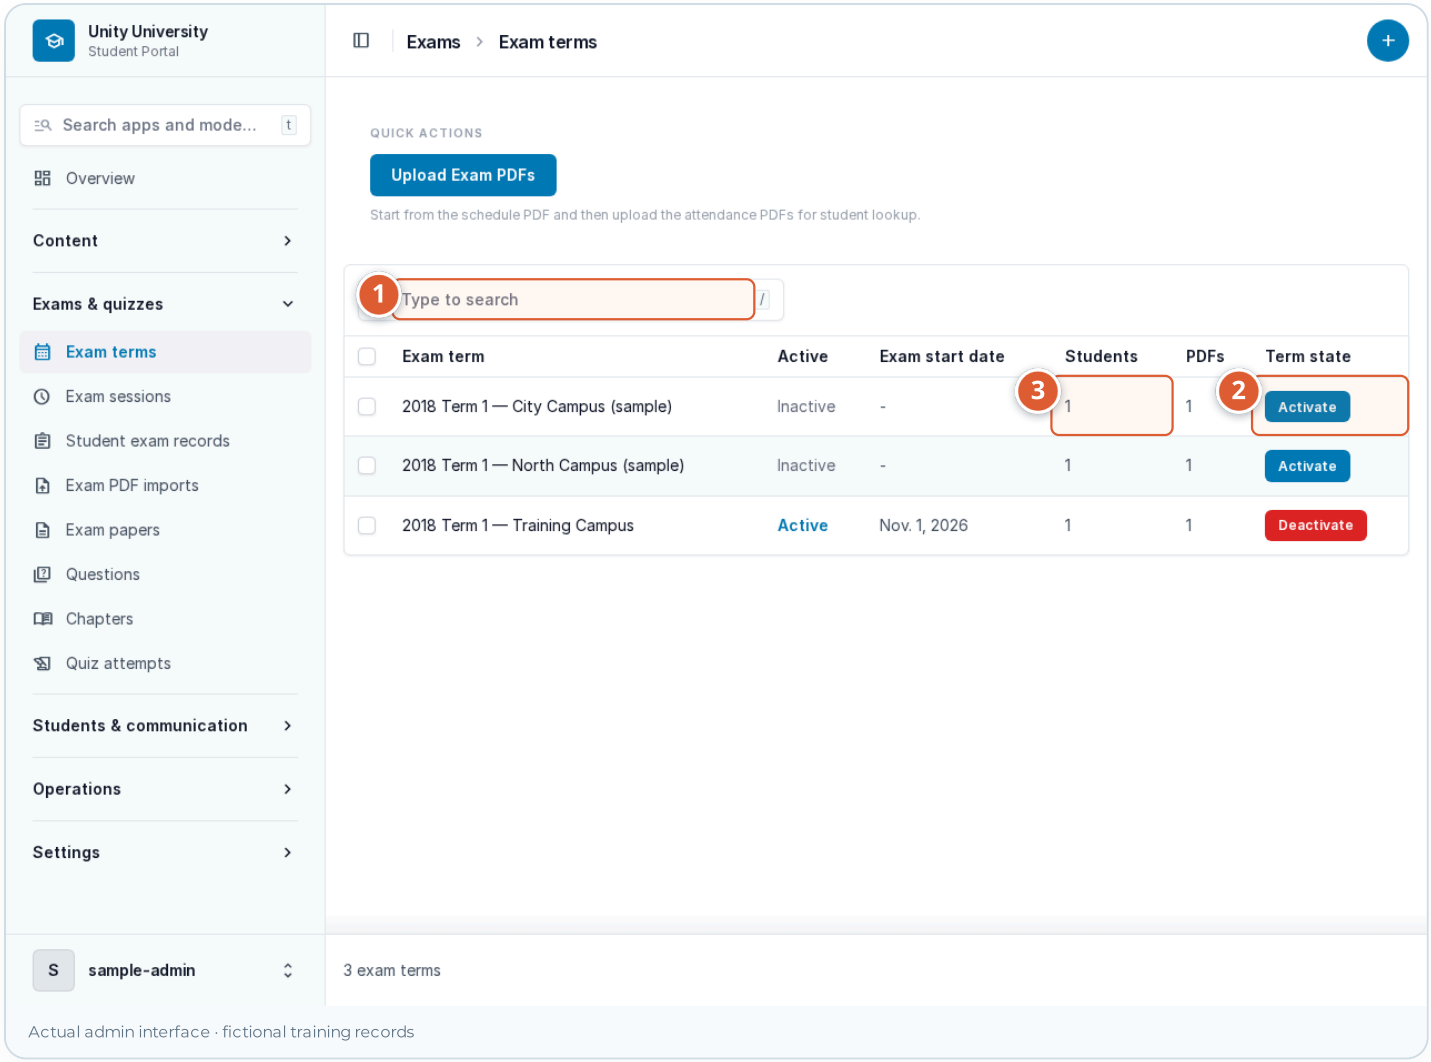

Only Published material counts as coverage. A draft alone does not make a course covered. Placements determine department/program scope.

DONE WHEN

You know which courses need material and can open the relevant review or creation screen.

Choose the right exam term

WHERE TO GO / Exams & quizzes → Exam terms

Actual admin interface · fictional training records

Read the result message after saving or applying an action. A selection alone does not apply changes.

1 Find or create the term

Search by center or year. Use the header + button to add a term when needed, then check year, term and center.

2 Confirm the active term

Use the row's Activate control only for the term that should be current. Activating one term deactivates the others.

3 Check imported records

Student and PDF totals help confirm the term. Open it, scroll to Quick Actions and choose Upload and Process Exam PDFs.

REMEMBER

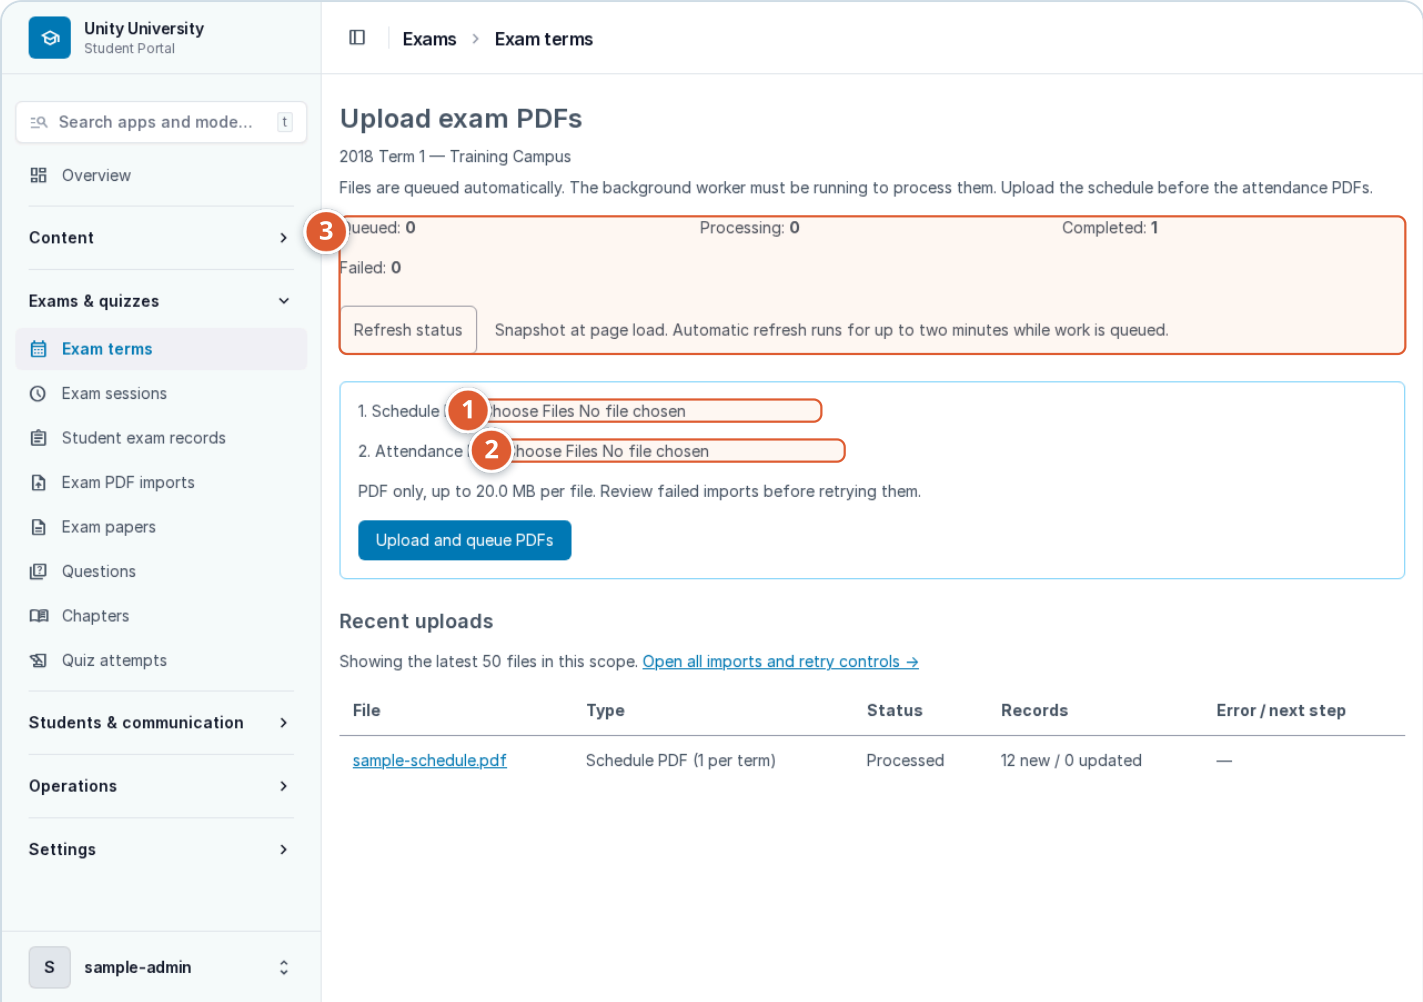

The year label uses the Ethiopian calendar. Exam start date is read-only here and is derived from imported schedule sessions. Verify the imported dates.

DONE WHEN

The intended term and center are identified, and the correct term is active.

Upload schedules, then attendance

WHERE TO GO / Overview → Upload exam PDFs; or Exam term → Quick Actions → Upload and Process Exam PDFs

Actual admin interface · fictional training records

1 Upload the schedule first

Choose the official schedule PDF. It establishes sessions and course/room information. Wait for it to complete before attendance imports.

2 Add attendance PDFs next

Choose the attendance files for the intended term. Press Upload and queue PDFs once you have checked the selection.

3 Watch the result

Use Queued, Processing, Completed and Failed counts. Refresh status checks again; recent-upload rows show created/updated counts and errors.

REMEMBER

Use the per-file limit displayed on the page. Uploading queues work; it does not finish the import. Review failed imports before retrying. Known duplicate uploads may be skipped.

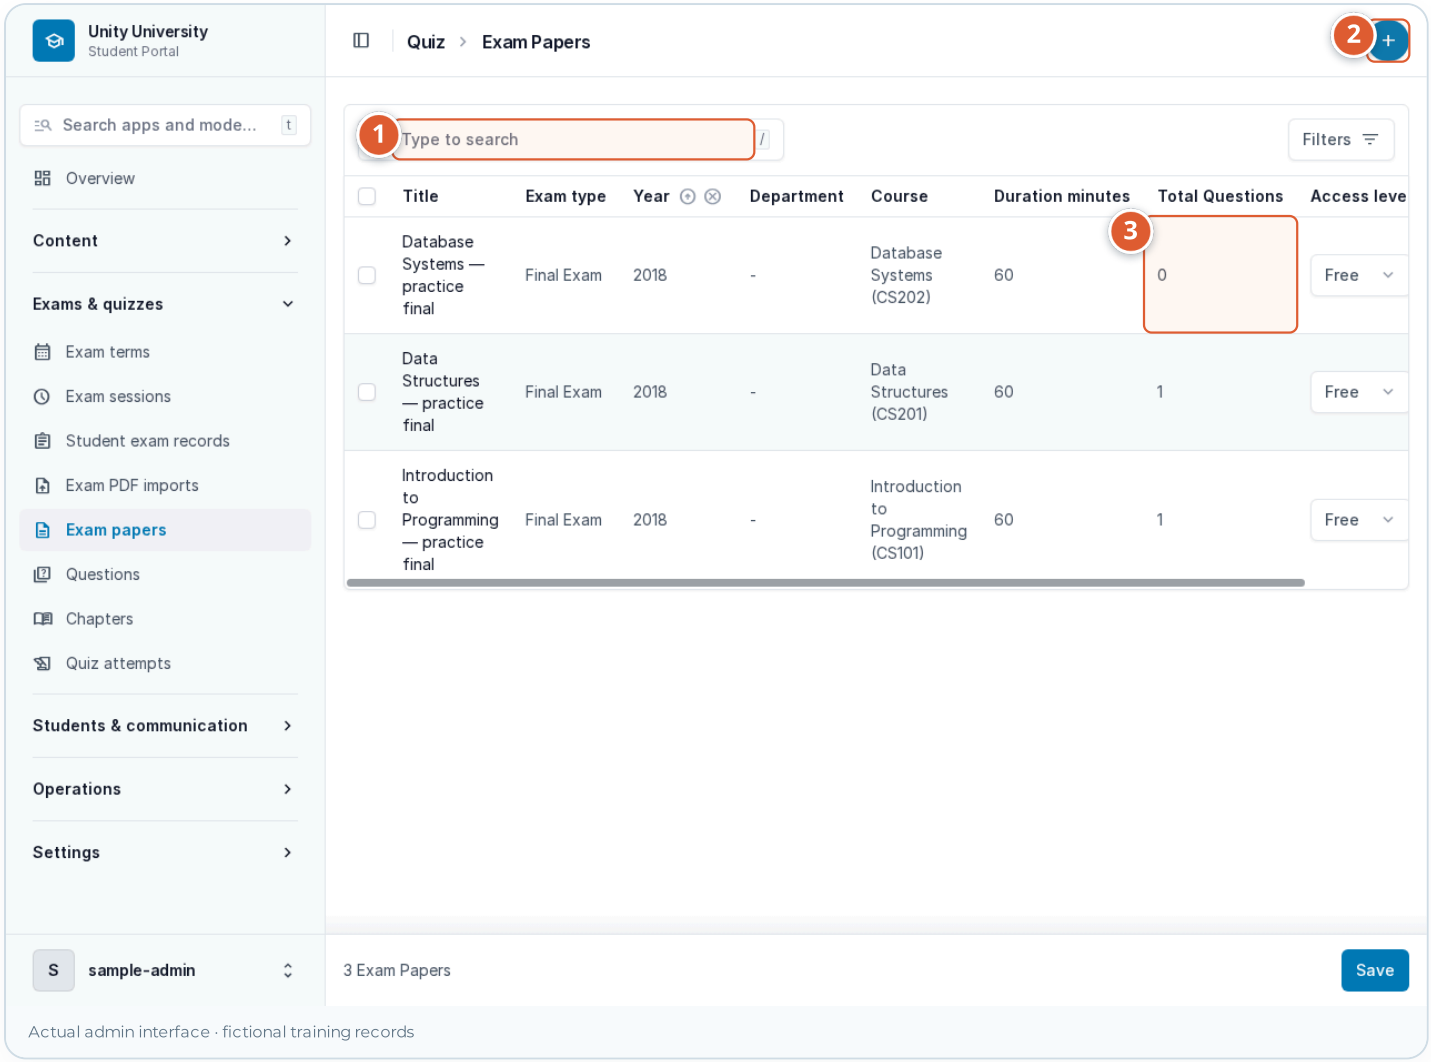

DONE WHEN

The expected imports are Completed and their records and dates have been reviewed.

Read the result message after saving or applying an action. A selection alone does not apply changes.

Prepare an exam paper

WHERE TO GO / Exams & quizzes → Exam papers

Actual admin interface · fictional training records

Read the result message after saving or applying an action. A selection alone does not apply changes.

1 Find the right paper

Search by title, course or department. Check exam type and year so you do not add questions to the wrong paper.

2 Create or open a paper

Use the header + button or open its title. Final Exam and Team Quiz use a Course; Exit Exams use a Department.

3 Check readiness

Review the active question count and set a duration. Keep access Free during adoption and enable the paper only when it is ready.

REMEMBER

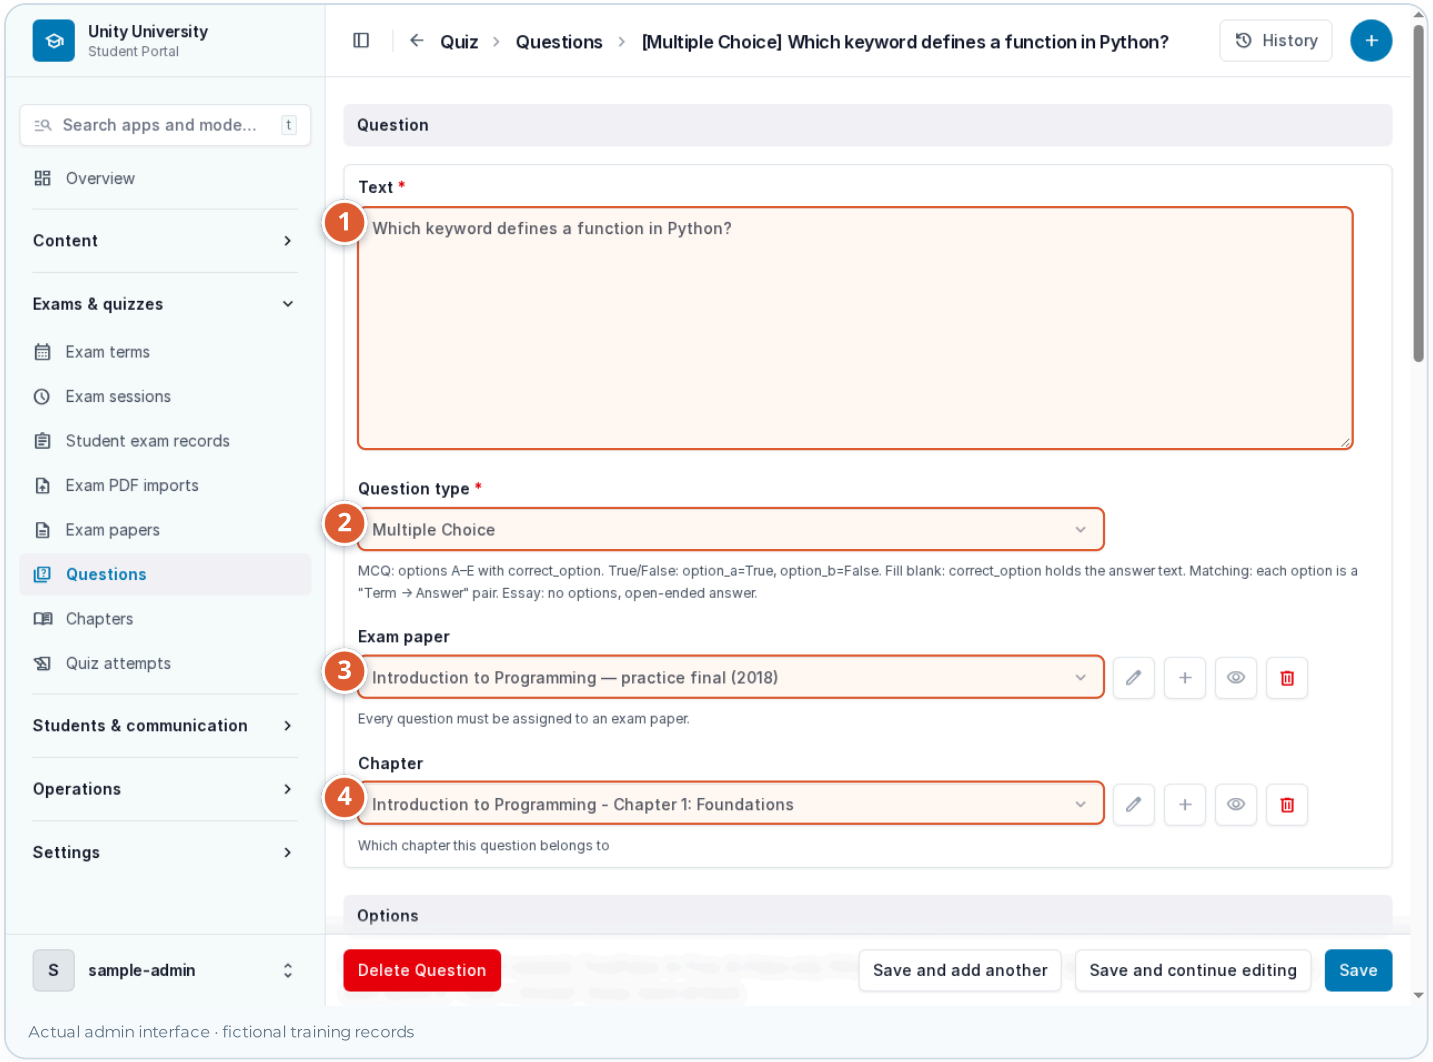

For spreadsheet imports, open a paper and scroll to Quick Actions → Import Questions from Excel. Download that page's template, keep its columns and upload the workbook. Imported questions start inactive.

DONE WHEN

The paper has the correct ownership, duration and a reviewed set of questions.

Assign and review a question

WHERE TO GO / Exams & quizzes → Questions → open a question

Actual admin interface · fictional training records

Read the result message after saving or applying an action. A selection alone does not apply changes.

1 Read the full question

Compare the wording with the source. Correct extraction errors and make sure the question can be understood on its own.

2 Choose the correct type

Set the question type before editing answer fields. Multiple choice, true/false, matching, fill blank and essay use different answer formats.

3 Assign the exam paper

Choose the intended paper. A question without a paper needs assignment before it can be used in that paper.

4 Check the chapter

Choose a chapter that belongs to the same course as the paper. Then continue to the options and explanation below.

REMEMBER

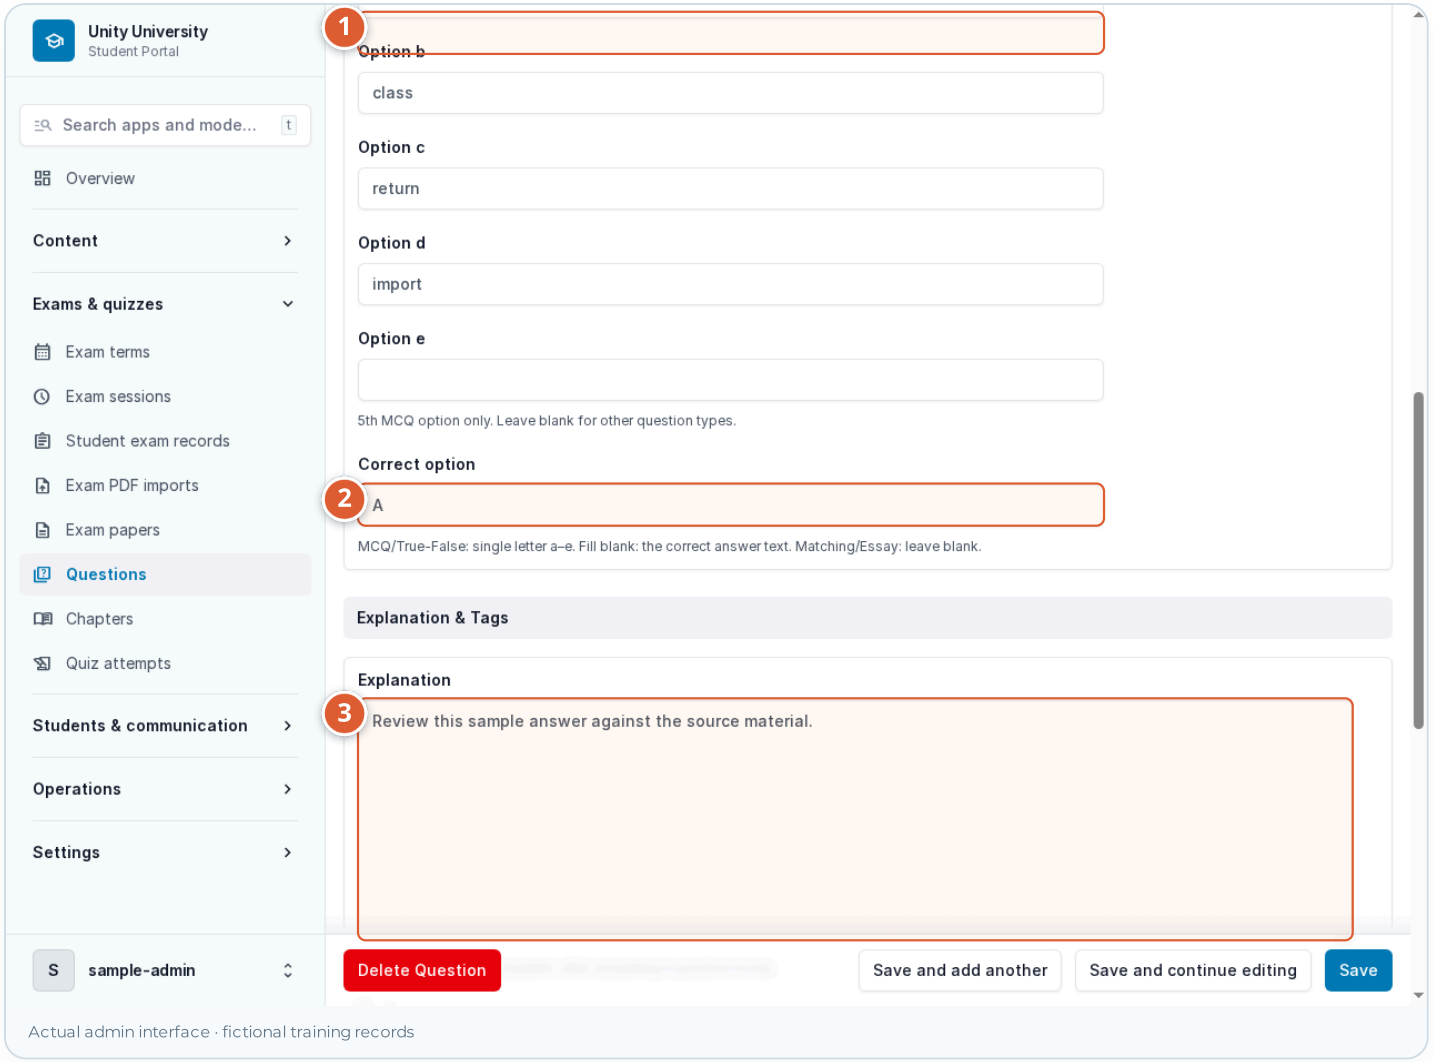

AI output is a draft. From File inbox, Extract questions from selected files using AI queues extraction; then review the resulting questions and paper assignments.

DONE WHEN

The wording, question type, paper and chapter have been checked against the source.

Verify answers before activation

WHERE TO GO / Questions → open a question → Options / Explanation & Tags

Actual admin interface · fictional training records

Read the result message after saving or applying an action. A selection alone does not apply changes.

1 Review each answer option

For MCQ fill A–D, and E when needed. For true/false use A=True and B=False. Follow the form's guidance for the selected type.

2 Verify the correct answer

Check Correct option against the source, not just the extracted text. For fill blank enter the answer there; essay answer fields remain blank.

3 Explain and tag

Add a useful explanation and review difficulty, year and topic tags. Scroll to Visibility, choose Active only after review, then Save.

REMEMBER

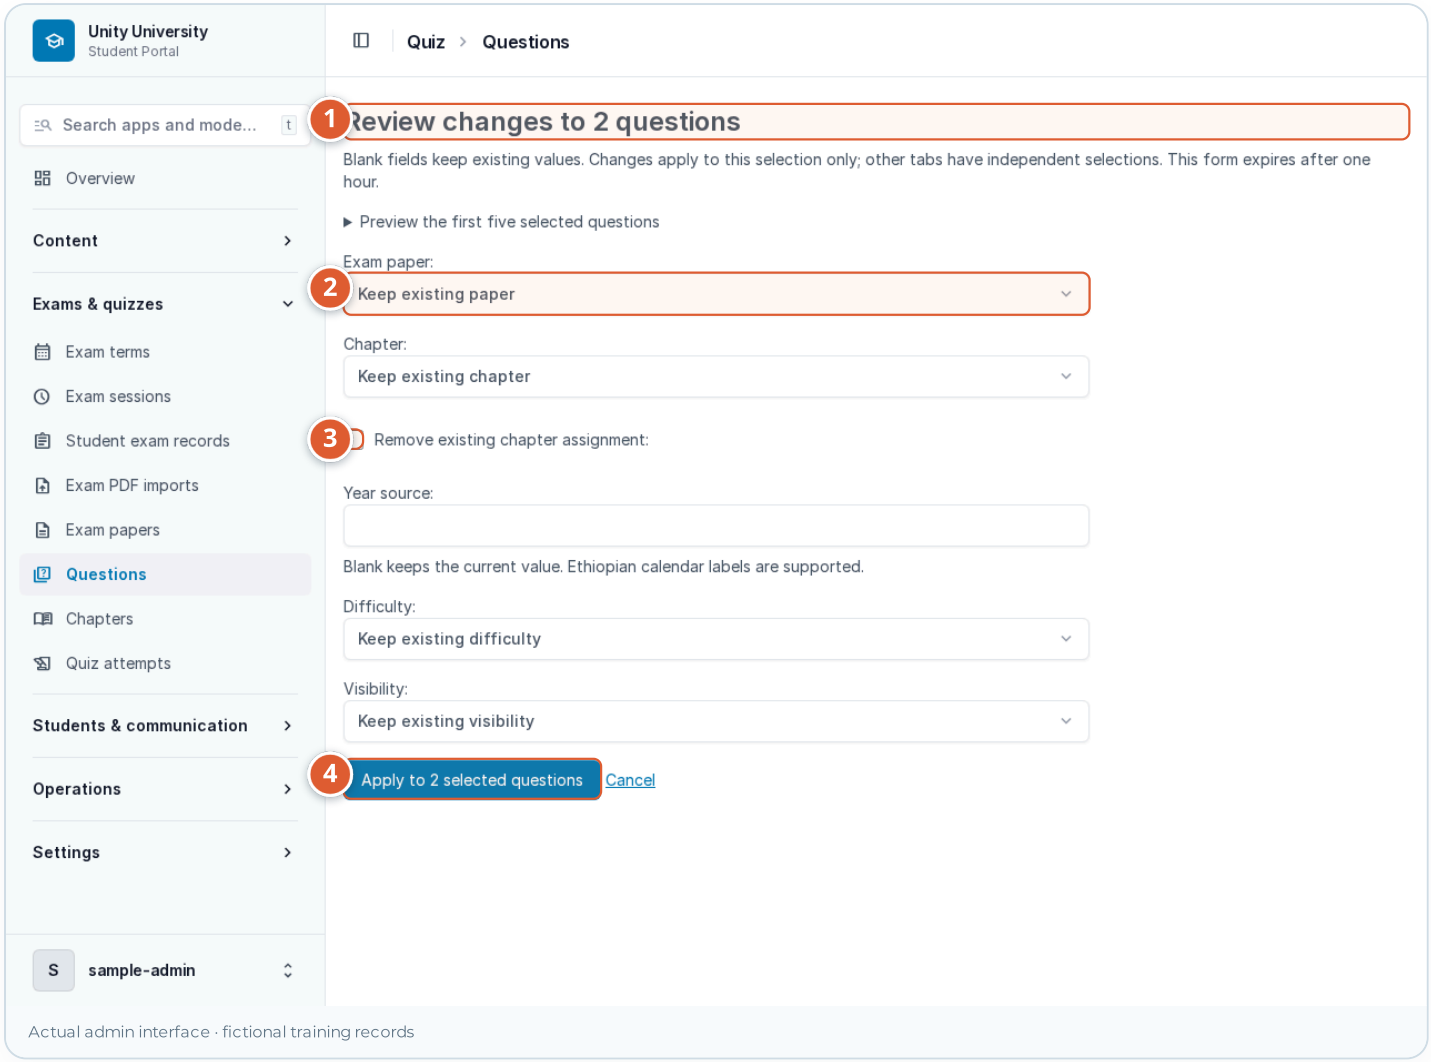

Active questions can be used by students. For several reviewed items, choose Activate selected questions in the list and Go; read the result message.

DONE WHEN

The answer and explanation are correct and the intended questions are active.

Apply question changes carefully

WHERE TO GO / Questions → select rows → Actions → Set metadata for selected questions → Go

Actual admin interface · fictional training records

Read the result message after saving or applying an action. A selection alone does not apply changes.

1 Confirm the selection

The heading shows the number of questions. Expand the preview of the first five and confirm the selection before changing anything.

2 Set only intended fields

Choose a paper or chapter when changing those assignments. Blank fields keep their existing values; each tab has its own selection.

3 Remove a chapter explicitly

Use Remove existing chapter assignment only when intended. Do not also choose a new chapter.

4 Apply or cancel

Scroll to Apply to N selected questions. Check the count, apply, and read the result. Cancel returns without applying the edits.

REMEMBER

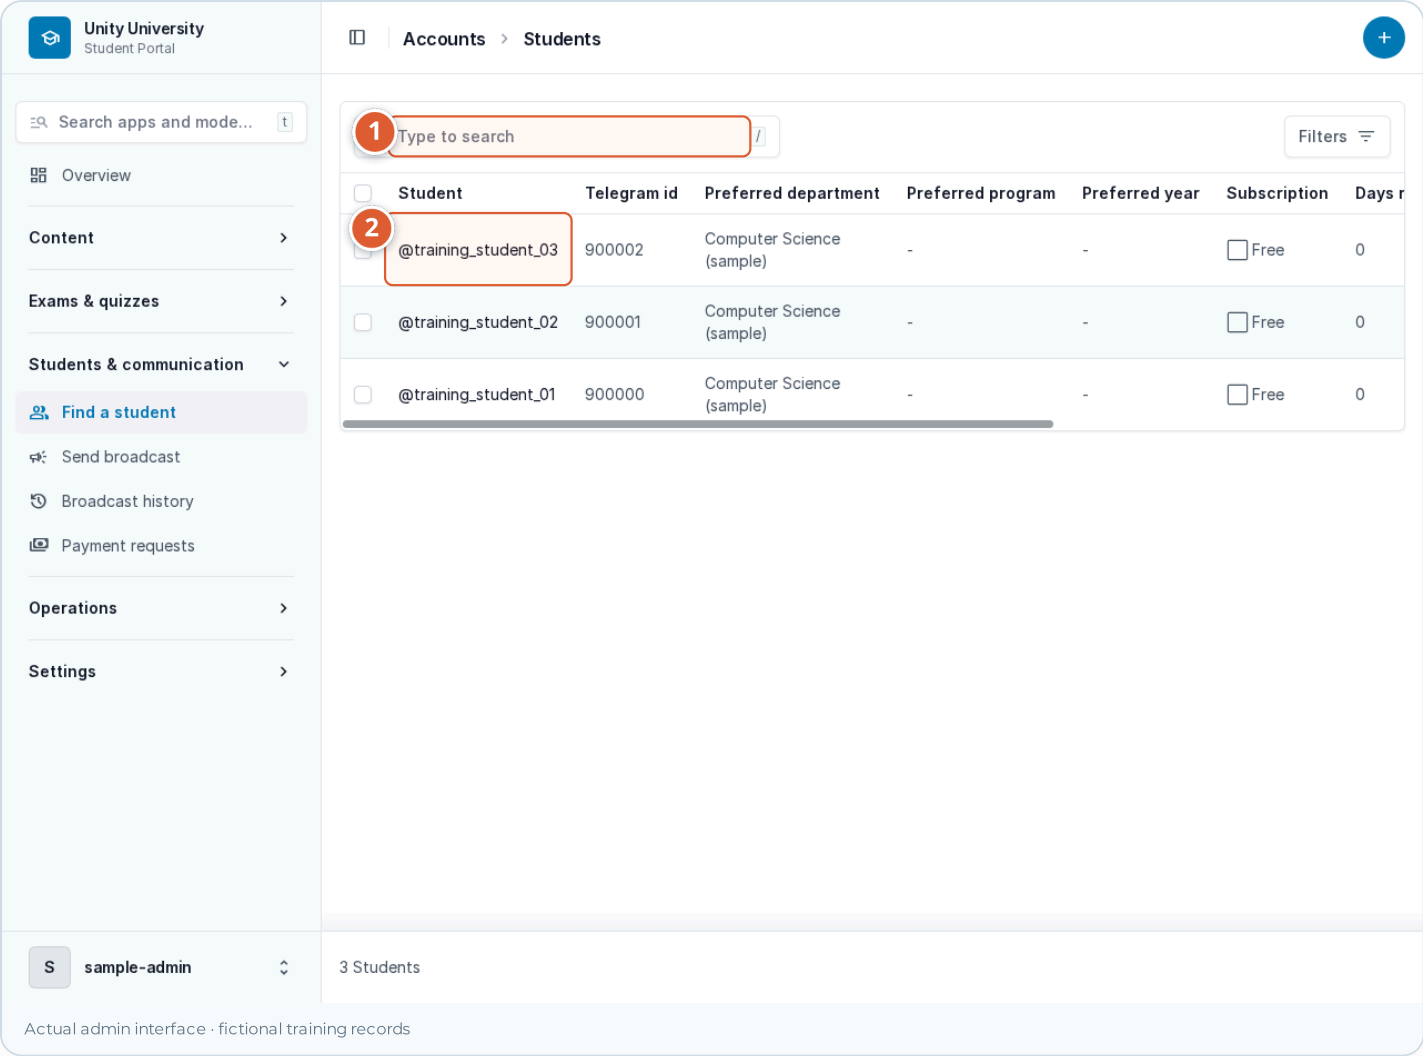

The review form expires after one hour. If it expires or reports an error, return to Questions, reselect the records and review again. Do not assume a partial change succeeded.

DONE WHEN

Only the selected questions have the intended changes, and the result message confirms success.

Find the right student

WHERE TO GO / Students & communication → Find a student

Actual admin interface · fictional training records

1 Search by identity

Use a name, Telegram username or Telegram ID. An exact Telegram ID is useful when names are shared by several people.

2 Open the matching record

Confirm identity before editing preferences or investigating a subscription. Review department, program, year and subscription details.

3 Use the related screens

Payment requests shows payment state. Exam records and Quiz attempts help investigate academic activity; use their own search and filters.

REMEMBER

Changing a student's preferred department does not publish resources or move an exam paper. Use the content and exam screens for those tasks.

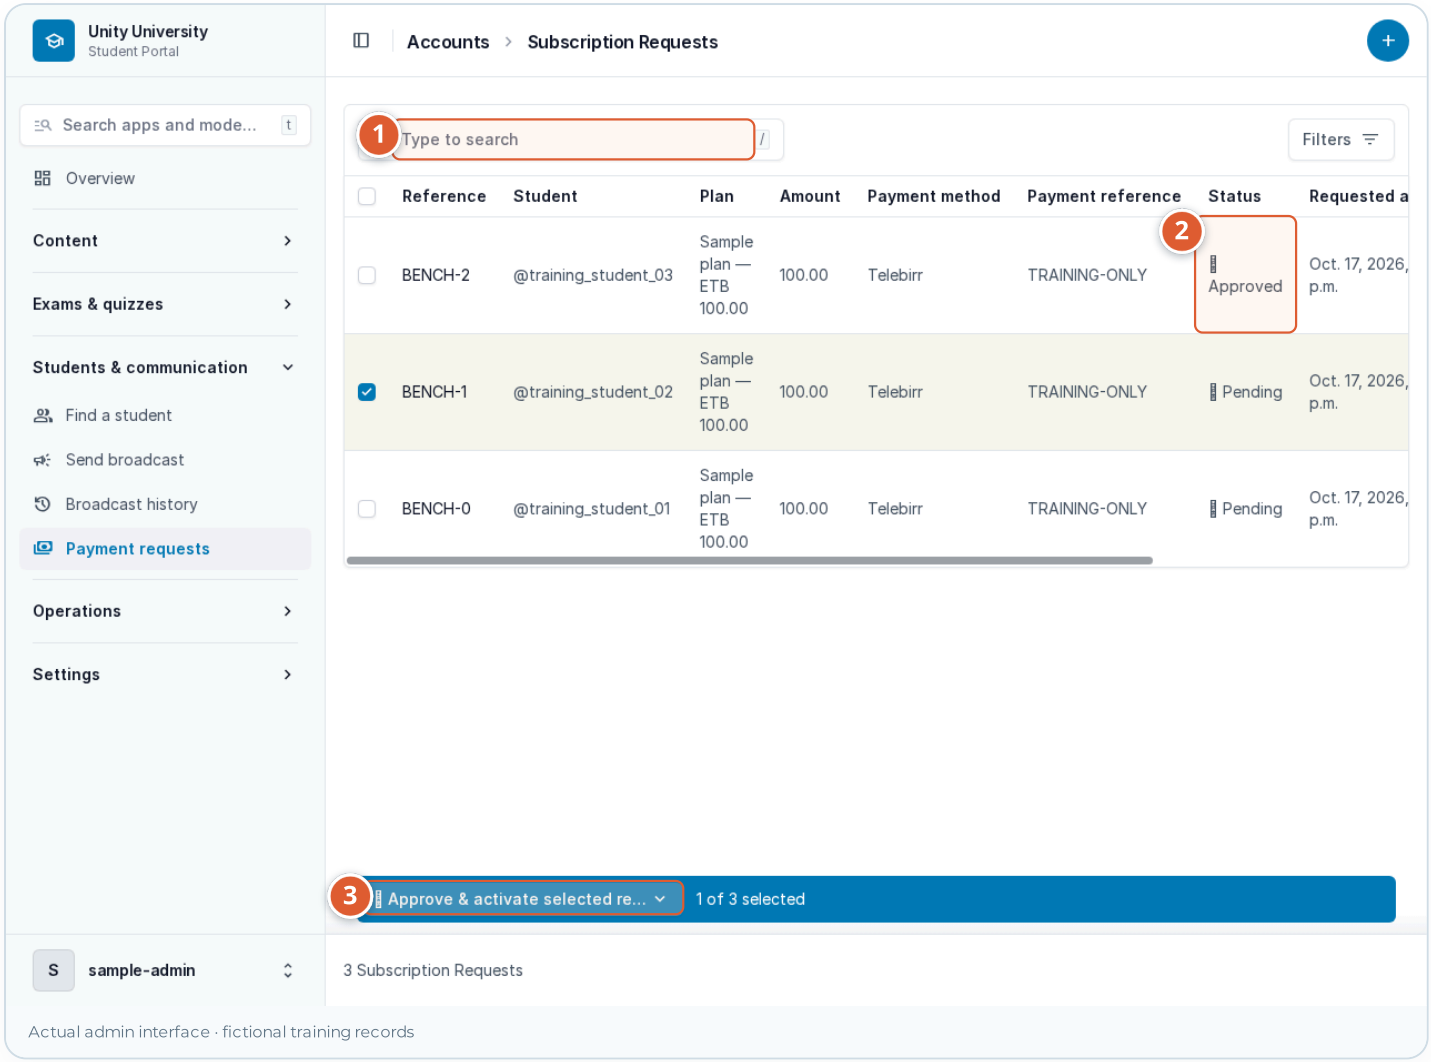

DONE WHEN

The correct student is identified and you are in the screen that owns the requested change.

Read the result message after saving or applying an action. A selection alone does not apply changes.

Review a payment request

WHERE TO GO / Students & communication → Payment requests

Actual admin interface · fictional training records

Read the result message after saving or applying an action. A selection alone does not apply changes.

1 Match the request

Search by reference, student identity or payment reference. Open the request and verify amount, method and reference against actual payment records.

2 Check the current state

Pending requests can be approved or rejected. Approved requests have already granted access and cannot be rejected through the normal action.

3 Select the intended action

Select the verified rows, choose Approve & activate selected requests or Reject selected requests, then Go. Read the applied/skipped counts.

REMEMBER

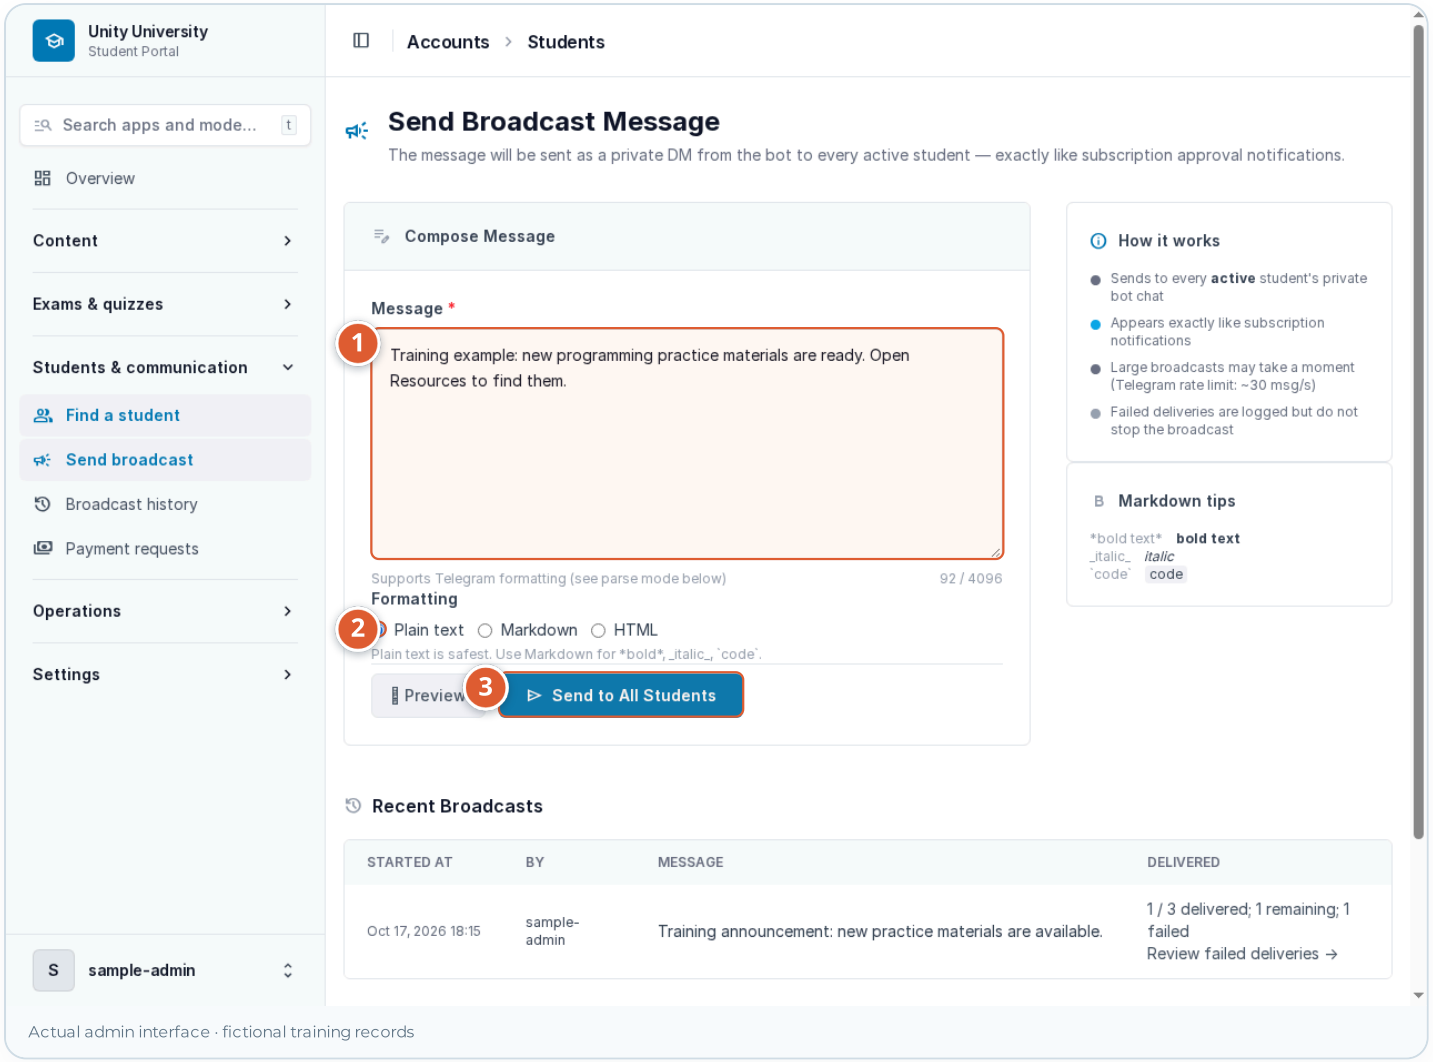

Use the explicit approve/reject actions. Do not treat Reject as an undo for an approved payment or renewal; ask the owner to review a correction. Notifications are queued for delivery.

DONE WHEN

The verified request has the intended state and the result message confirms what was changed.

Compose an announcement

WHERE TO GO / Students & communication → Send broadcast

Actual admin interface · fictional training records

Read the result message after saving or applying an action. A selection alone does not apply changes.

1 Write a focused message

Check the wording, dates, course names and links. Messages are limited to 4,096 characters.

2 Choose formatting

Plain text is the simplest choice. If you use Markdown or HTML, verify the syntax and the final message.

3 Preview, then open confirmation

Use Preview to inspect the message text, then Send to All Students to open the recipient-count confirmation dialog.

REMEMBER

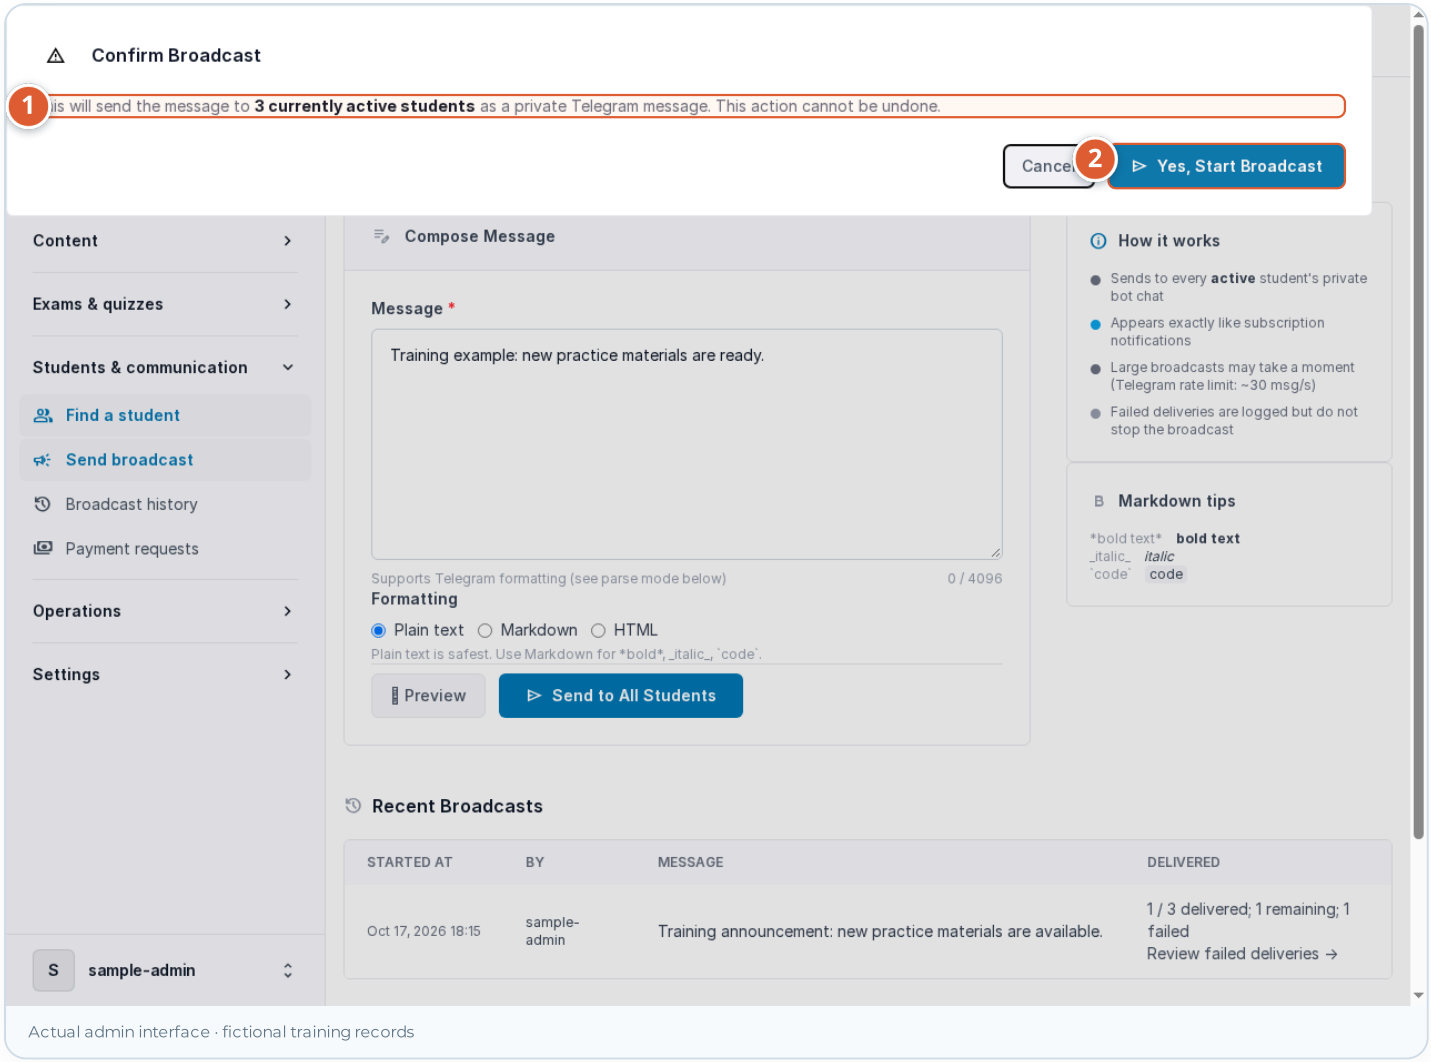

This sends to every currently active student's private bot chat. It is not a course-only audience. The text preview does not prove Telegram will accept formatting.

DONE WHEN

The message is proofread and the confirmation dialog shows the intended audience.

Confirm once, then track delivery

WHERE TO GO / Send broadcast → confirmation → Broadcast history / Message delivery

Actual admin interface · fictional training records

Read the result message after saving or applying an action. A selection alone does not apply changes.

1 Read the audience count

Confirm that a message to all active students is intended. Cancel returns to editing without sending.

2 Confirm only when ready

Use the dialog's send confirmation once. The submission token prevents an identical repeated submission from creating another send batch.

3 Follow the delivery results

Check recent broadcast history for total, delivered, pending and failed counts. Open failed deliveries to review their errors and retry only after fixing the cause.

REMEMBER

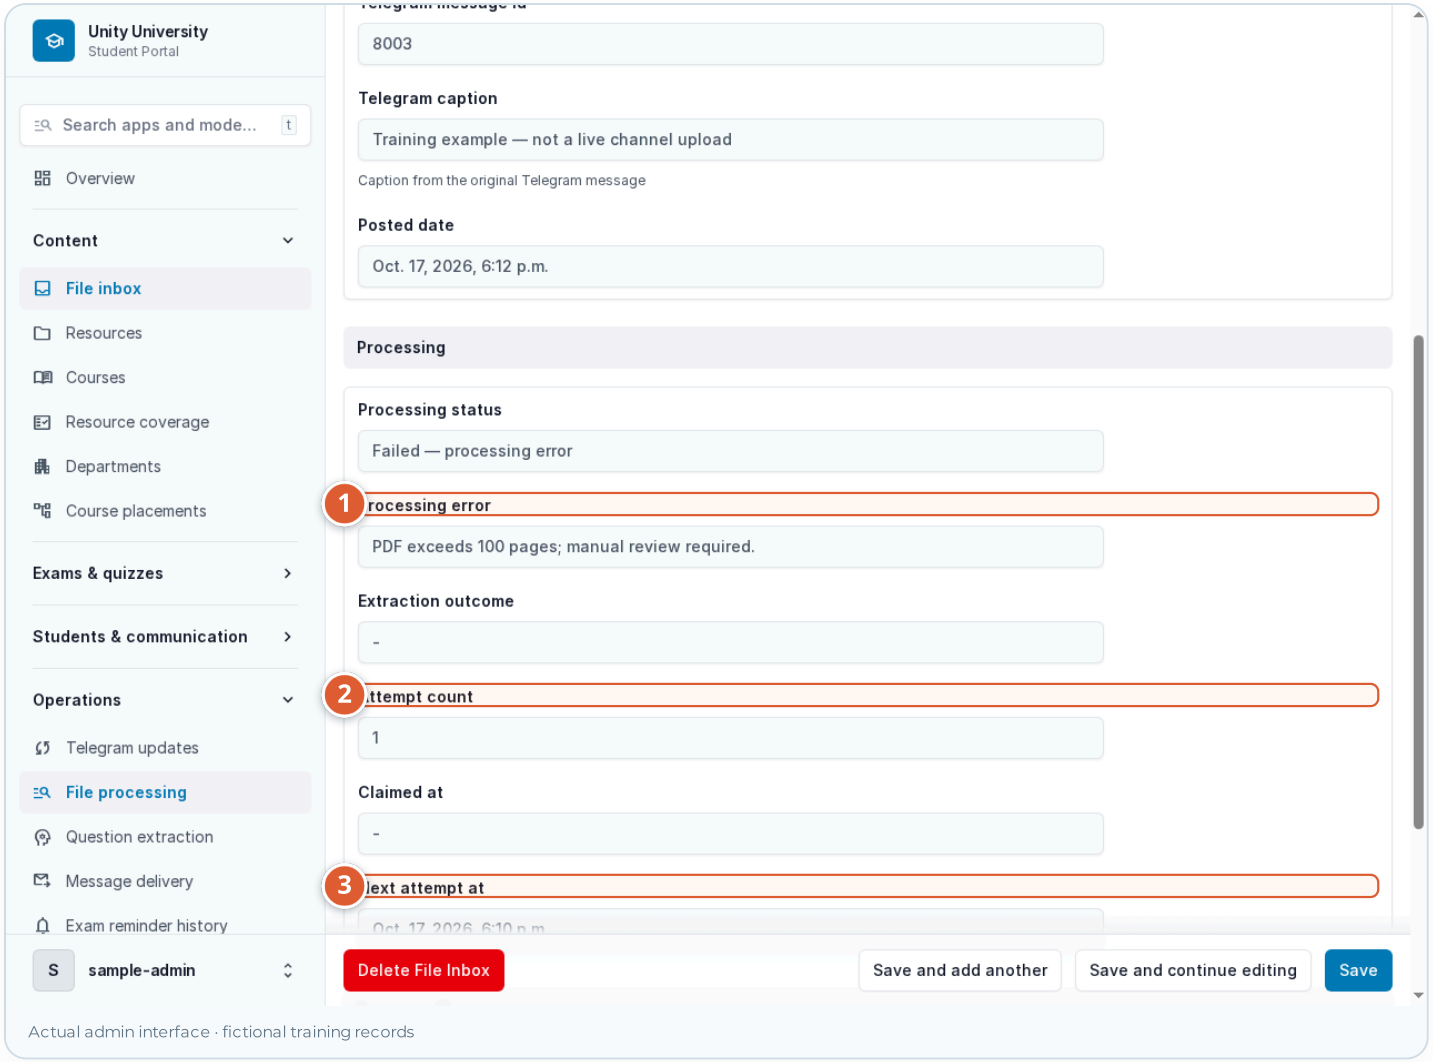

Queued is not delivered. Do not resend the whole announcement because some recipients failed; use the failed-delivery review workflow instead.

DONE WHEN

You can distinguish successful deliveries from pending or failed messages without creating a duplicate broadcast.

Read the error before retrying

WHERE TO GO / Overview → a failed count, or Operations → the relevant process

Actual admin interface · fictional training records

Read the result message after saving or applying an action. A selection alone does not apply changes.

1 Read the processing error

Open the failed record. Identify whether the source file, size/page limit, formatting or external service caused the problem.

2 Check previous attempts

Review Attempt count and the source. A repeated retry will not fix the same oversized or unreadable file.

3 Return and retry after review

Use the matching list's Retry failed… action only after addressing the cause. The record returns to the queue for the worker.

REMEMBER

The current extraction limit is 100 pages. For persistent Overdue or Stale counts, contact the maintainer to check the worker and logs. Manually mark as processed does not extract text.

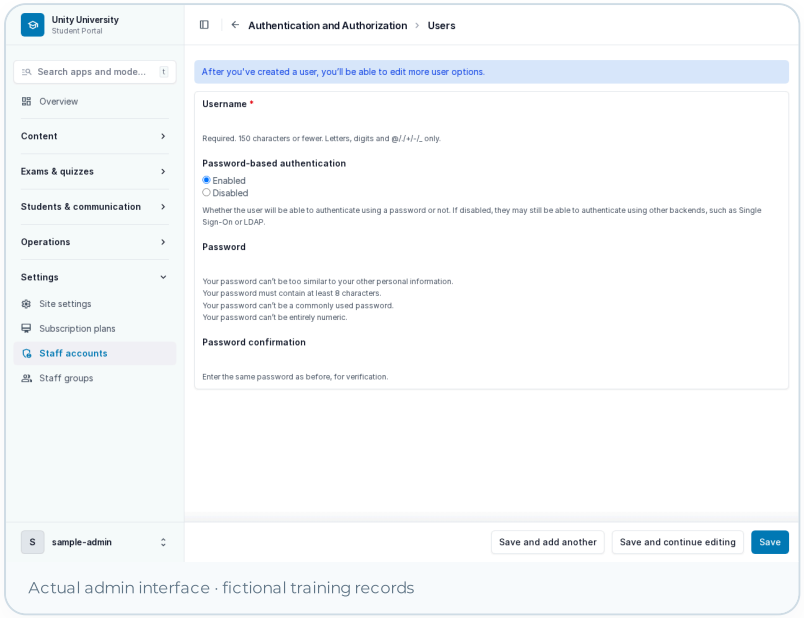

DONE WHEN

The cause is understood and either a corrected retry is queued or the issue is handed to the maintainer.

Give each admin the access they need.

Owners manage staff accounts and groups. Everyday admins use their assigned tools and ask the owner when a task needs additional permission.

Settings → Staff accounts / Staff groups

Actual admin interface · fictional training records

Each person should have an individual account. Staff groups keep recurring responsibilities consistent.

For the owner

1 Create the staff account

Open /admin/auth/user/add/ on your admin site if Add user is not visible in the theme. Complete setup, then edit the account to enable active/staff access.

2 Assign the appropriate group

Use Staff groups to assign the model permissions required for the person's tasks. Reserve superuser access for trusted owners.

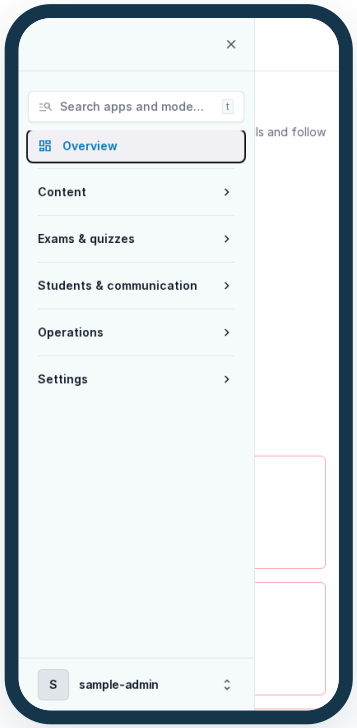

3 Check the actual staff experience

Ask the new admin to sign in and confirm the expected menus and actions. A missing menu can be a permissions issue.

DAY-TO-DAY HABIT

Use your own login, check the record and selection count before applying changes, and sign out on shared devices.

On a narrow screen

Use the top-left navigation button. Expand a group, then choose a screen. Escape closes the menu; Tab moves through controls. Wide tables may scroll sideways.

KEEP THIS PAGE HANDY

Your daily admin checklist.

A five-minute starting routine

- [ ] Open Overview and inspect failed, overdue or stale work.
- [ ] Review processed, unassigned inbox files and create drafts.
- [ ] Finish course assignment and file review before publishing.
- [ ] Check Resource coverage for courses with no published material.
- [ ] Review new imports, inactive questions and the active exam term.
- [ ] Check pending payment requests and broadcast failures when relevant.
- [ ] Read each action result; record unresolved issues for the maintainer.

Open → Review → Apply → Verify

A USEFUL HANDOVER

Include the admin section, record ID, intended result, observed result and error text. Do not share passwords, bot tokens or expiring private download links.

When something feels stuck

WHAT YOU SEE	WHAT TO DO NEXT
Draft will not publish	Attach a file, assign an active course, review it and save. Read validation and skipped-record messages.
Upload stays queued	Check the relevant Operations list. If work stays overdue, ask the maintainer to check the worker; do not upload repeatedly.
PDF extraction failed	Read the error and source. A file over 100 pages requires review; retrying the same oversized file will not fix it.
Exam progress stops refreshing	The automatic check is bounded. Use Refresh status to check again, then open the failed import if needed.
File preview does not open	Try Open file for review. Report the resource ID and observed error to the maintainer; keep an unverified file pending.
Broadcast has failures	Inspect Message delivery and retry only reviewed failed records after resolving the cause. Do not resend the whole broadcast.
A menu or action is missing	Ask the owner to check staff/group permissions. Also confirm that a row is selected when looking for Actions.
Bulk review has expired	Return to Questions, select the intended rows again and open a fresh review form.

Guide based on repository interface e982e1e. Screenshots are from an isolated training instance, not live student data. Recheck the guide after interface or policy changes. Free adoption remains the current operating policy.
